bjorn@iko.travel

# AGENDA

- API-driven design
- Demo
- API lifecycle

# API DESIGN

# HORROR STORIES

**HATEOAS**

```
{
  "id": "10",
  "name": "Pizza Napoli",
  "price": 260,
  "links": [
    {
      "href": "/pizzas",
      "rel": "pizzas",
      "type": "GET"
    }
  ]
}
```

Hypermedia as the Engine of Application State

“Dynamic web linking”

HAL: Hypermedia API Language

Media type: application/hal+json OR xml

# VERBS

- GET (200)
- POST (201)
- PUT (200 / 204)
- PATCH (200 / 204)
- DELETE (200 / 202 / 204)

200 = OK

201 = Created

202 = Accepted

204 = No content

# ERROR CODES

- 100x Informational codes
- 200x Success codes
- 300x Redirect codes
- 400x Client error codes
- 500x Server errors

200 = OK

201 = Created

202 = Accepted

204 = No content

A purple rectangular area with a pattern of small, light-colored dots. The dots are arranged in a grid-like fashion, with some dots being slightly larger or more prominent than others, creating a textured effect. The text "OPEN API" is centered within this rectangle.

**OPEN API**

- Write docs while you code
- Open API (fka: Swagger)
  - For HTTP-based API designers
  - Supports most languages
  - It's a standard! => Postman
  - Code generators

**DEMO**

# API LIFECYCLE

- Changes / Deprecations
  - Features
  - Entities
  - End points

- Versioning
  - Consider backwards compatibility
    - Decouple storage / conceptual model
  - URL-based. e.g. /v1/ => /v2/
  - Header based:
    - Accept / Content-Type: application/vnd.my-product-v1+json
    - Custom: “my-product-version” - 1
